

WIDTH FITTINGS

Some styles are made in a variety of width fittings. Select the appropriate width fitting from the drop down box when placing your order.

The difference between our wide and our regular fitting is 3mm. For extra wide fitting shoes the difference in width between our regular fit is 6mm.

Our wide fitting fits approximately half a size up in terms of width and the extra wide is approximately a whole size up in terms of width.

Our narrow fitting fits approximately half a size down in terms of width.

Pointed toe court shoes are approximately a half size wider than the rounded toe court shoes.

In general the fitting can vary between different styles so please take this into account before ordering.

When altering the width of the shoes, the width of the soles does not change only the Upper will alter in size.

The insole width is the same for narrow, regular and wide fitting shoes. The only part which changes is the Upper, which will increase in circumference for a wide fitting and decrease for a narrow fitting.

THE TABLE GIVES AN EXAMPLE OF THE WIDTH FITTINGS FOR A SIZE 5 SHOE

Our width fitting table just shows our UK sizes, for instance if you are a UK 5 and unsure of which fitting to go for we would recommend trying the sizes shown in the right hand side column.

For example:

The width of the UK 5 Narrow is the same as the UK 4 ½
The width of a UK 5 Wide is the same as the UK 5 ½
The width of the UK 5 Extra Wide is the same as the UK 6
